

orion collection

rené vullings / philip bogaerts

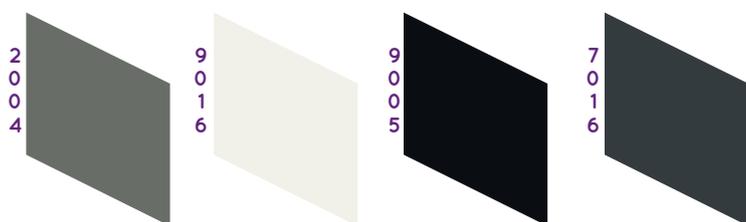

Orion is an acoustic room divider which creates a friendly touch in spaces where human dimension has been lost. The room divider is designed for public spaces to create smaller, user-friendly areas within a professional environment. The acoustic benefits of Orion will contribute to an appealing setting for studying, working or meeting.

The base is made of steel and finished with a strong powder coating. The screen can be delivered with optional wheels to keep a flexible working environment. The panels are made of sound absorbing foam and covered with Hush textiles from Gabriel which are specifically designed to optimize sound absorption.
